

Eli Beber

github.com/Trate318 | (207) 992-6660 | ebeber318@gmail.com

Availability: January – June 2026 | Boston, MA

EDUCATION

Northeastern University, Boston, MA

Bachelor of Science in Computer Science

May 2028

Honors: 4.0/4.0, Dean's List, Dean's Scholarship

Relevant Courses: Fundamentals of Computer Science, Program Design and Implementation 2 (formerly called Object Oriented Design), Discrete Structures, Introduction to Digital Design and Computer Architecture, Introduction to Databases, Foundations of Data Science, Introduction to Cybersecurity, Technology and Human Values, Public Speaking

TECHNICAL SKILLS

Languages: Java, C#, Python, Racket, SQL

Tools: Unity, MySQL, Git, GitHub, Fabric API, Visual Studio Code, IntelliJ

WORK EXPERIENCE

Software Developer, **Oceania University of Medicine**, Remote

June 2023 – Aug. 2023

- Contributed to the backend development of the Student Information System, debugging and refactoring code to improve maintainability and efficiency.
- Designed and optimized MySQL queries to dynamically sort and present data on web pages, streamlining data accessibility for users.
- Enhanced backend infrastructure by implementing query optimization and performance improvements, improving online functionality for 300+ active users.

Lifeguard, **Camp Waziyatah**, Waterford, ME

July 2022 – Aug. 2022

- Ensured the safety of large groups of camp participants in high-pressure environments, developing strong leadership and decision-making skills under time constraints.
- Collaborated with a diverse team to enforce safety protocols and respond effectively to emergencies, building clear communication and teamwork skills.

PROJECT EXPERIENCE

Developer, **Desktop Image Converter**, Tech. Stack: Python

September 2025 – Present

- Coded in Python to create a Tkinter-based desktop image converter with multiple features, including drag-and-drop, clipboard paste, and file dialog imports.
- Designed dynamic file preview and metadata display with automatic filename detection and customizable renaming.
- Expanded the export functionality by enabling flexible format conversion with options to save locally or copy converted images directly to the clipboard.

Game Developer, **Game Development**, Tech. Stack: C#

June 2023 - Present

- Designed and programmed multiple games in Unity using C#, building modular systems to streamline development.
- Iteratively refined gameplay based on player feedback, improving user experience and engagement.
- Published several completed games publicly on trate.itch.io, demonstrating full-cycle development from concept to release.

Developer, **Custom Keybinds Mod (Minecraft, Fabric API)**, Tech. Stack: Java

July 2025 – Aug. 2025

- Built a Minecraft mod in Java using the Fabric API, implementing a customizable keybinding system to trigger in-game actions beyond default controls.
- Designed a modular architecture to support seamless integration of future keybinds and features.

Programmer, **Version Control System**, Tech. Stack: Python

September 2025 – October 2025

- Designed and implemented the diff file component of a custom version control system using Python, enabling efficient tracking of changes across file versions.
- Included a clear print display to highlight line-by-line changes for easier readability and collaboration among multiple users.

Developer, **Auto-MLA (Chrome Extension)**, Tech. Stack: JS, HTML, CSS

May 2025 – June 2025

- Built an Auto-MLA Chrome extension that streamlines academic writing by automatically generating MLA-formatted Google Docs with proper headers, spacing, and typography, reducing document setup time from minutes to seconds.
- Integrated Google Apps Script web API with Chrome extension architecture to handle cross-origin POST requests and server-side document formatting, implementing OAuth 2.0 authentication for secure Google Cloud Platform access.
